The K-type Reciprocating Feeder is a material conveying device designed based on the principle of reciprocating motion. It primarily consists of a frame, a drive unit, a crank-connecting rod mechanism, and a feeding trough. The drive unit actuates the crank-connecting rod mechanism, causing the feeding trough to perform a reciprocating linear motion, thereby propelling the material forward along the trough for continuous and stable feeding. This device features a compact structure, adjustable feeding rate, and stable operation, making it suitable for feeding various bulk materials.
