According to this study, the global Ka-band Satcom Terminals market size will reach US\$ million by 2031.

Ka band satellite communications (SATCOM) frequencies provide new opportunities to meet high bandwidth demands, especially for small aerial, maritime and mobile land platforms supporting beyond line of sight requirements for networkcentric operations. This is possible due to the availability of 3.5GHz of bandwidth, and also because Ka ground segment components are typically smaller in dimension compared to those of Ku band. However, Ka band links experience much higher rain fades in tropical regions as compared to Ku band and C band. This report focus on Ka-band Satcom Terminals market.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.
