KCI optics refer to optical devices such as lenses, windows, and prisms made of potassium chloride crystal materials. These elements take advantage of potassium chloride's high transmittance and low absorption over specific wavelength ranges and are used in a variety of optical systems. KCI optics play an important role in many optical systems that require high transmission and low absorption, especially in the infrared band and high-power laser applications. Although its hygroscopic properties require special attention, its excellent optical properties make it widely used in scientific research and industrial applications.

The global KCI Optics market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
