The global Kegel Exerciser market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Kegel trainers are currently mainly used for postpartum recovery. Kegel exercise is an important way for pregnant women to recover after childbirth. Although the number of newborns and pregnant women in the world has decreased, people are paying more and more attention to health. With promotion of Kegel sports, the demand for Kegel exerciser will increase.

Kegel exercise (English Kegeling), also known as pelvic exercise or pelvic floor muscle exercise, was announced by Dr. Arnold Kegel in the United States in 1948. Muscles') to strengthen the pelvic floor muscles that support the uterus, bladder, small bowel, and rectum. Increased muscle tone may improve urinary frequency, leakage, and incontinence, may help pregnant women recover after giving birth, and may have more intense orgasms.

Pelvic floor exercises sound simple, but many women have difficulty getting them right or establishing a consistent routine. Kegel exercise trainers have grown in popularity in recent years, and they can help these women with the right routine.
