Generally, digging a groove in a circular hole is called key seat milling machinery. The machine used for this cutting process is called key seat milling machinery.

Key seat milling machinery is used for products with large outside diameters, long cutting lengths, and wide keyway grooves. Compared to slotter machining, the key seater provides a cutting process suitable for larger products. A keyway width of about 50 mm can be cut in a single pass. The high-precision key seat milling machinery cutter moves up and down for cutting. Therefore, multiple products can be stacked and processed simultaneously within the stroke range.

The global Key Seat Milling Machinery market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
