Kiln dried firewood is firewood that has been dried in a kiln, which is a type of oven or furnace used for drying wood. This process removes moisture from the wood, making it burn more efficiently and produce less smoke and creosote. Kiln dried firewood typically has a moisture content of less than 20%, compared to air-dried firewood which can have a moisture content of 30% or more. This makes kiln dried firewood a popular choice for use in fireplaces, wood stoves, and outdoor fire pits.
