## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The kitchen bone crusher is installed under the kitchen sink, and the water flowing out from the sink outlet first passes through the 'kitchen bone crusher' and then passes into the sewer pipe. If there are leftovers or fishbone soup slag to be disposed of at home, first pull out the plug in the sink, turn on the faucet to keep the water flow moderate, then turn on the power switch to start the kitchen bone crusher, and then put the food waste out. After entering the pool, within a few seconds, the rubbish will enter the bone crusher with the water flow, be smashed into a paste, and flow into the sewer. Now with the bone crusher in the kitchen, it only costs a small amount of electricity to save the trouble of taking out the garbage, and the smell of garbage in the stair corridor is gone.
