A kitchen fume detector is an intelligent device used to monitor fume emissions in commercial kitchens (such as restaurants and canteens) in real time. It primarily measures the concentrations of pollutants such as particulate matter, non-methane hydrocarbons (NMHC), and volatile organic compounds (VOCs). Typically installed at the exhaust duct or flue outlet, the device is equipped with a highly sensitive sensor and data transmission module, enabling alarms for exceeding standards, data recording, and remote network monitoring to meet environmental protection authorities' compliance requirements for fume emission control in the catering industry. It is widely used in urban restaurant fume control, environmental inspection and acceptance, and daily operational monitoring. In 2024, sales volume will be 6.75 million units, with an average price of US$115, a single-line production capacity of 350,000 units, and a gross profit margin of 55%. Typically, each restaurant is equipped with one unit.
