The global Kitchen Plastic Wrap market size is predicted to grow from US\$ 1129 million in 2025 to US\$ 1470 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Kitchen plastic wrap refers to a food contact film packaging material used in home kitchens and small catering preparation scenarios to cover, wrap, refrigerate, freeze, store, prevent cross contamination, and moisturize and preserve food, plates, dishes, fruits and vegetables, cooked food, leftovers, and semi-finished products. Common materials include PE, PVC, PVDC, etc. Among them, PE cling film has the highest proportion in kitchen scenarios due to its safety, flexibility, and universal adaptability, PVC cling film still has certain use due to its good adhesion and transparency, PVDC and high barrier film are mainly used for foods with higher requirements for barrier properties and shelf life, and biodegradable cling film is aimed at environmentally friendly consumption and brand upgrading needs. In 2025, global Kitchen Plastic Wrap production reached approximately 1,217 K MT, with an average global market price of around US\$ 2,964 per MT.

Kitchen plastic wrap is a household commodity with high frequency, low unit price, and strong channel attributes. The overall demand is stable, and the growth mainly comes from the continuation of household food storage habits, the restoration of household cooking frequency, the increase in consumption of refrigerated and frozen foods, the convenience of online daily necessities procurement, and the increasing attention of consumers to food hygiene, odor prevention, convenient storage, and reducing food waste. Compared to supermarket roll wrap and food processing packaging film, kitchen cling film places more emphasis on tear resistance, adhesion, transparency, odor free, food contact safety, freeze fit, microwave fit, and packaging experience. Brand companies typically increase premiums through boxed cutters, slide blade designs, freeze or high temperature resistance, non plasticizer formulations, biodegradable

materials, and food contact compliance certifications. In terms of material structure, the share of PE cling film in household kitchen scenes will still increase. Although PVC products have good adhesion, their growth space is limited due to safety awareness and environmental pressure. PVDC and high barrier film are suitable for longer preservation needs but have higher costs. Degradable cling film has trend value but its short-term penetration speed is limited by price and performance. In the future, the focus of competition will be on food grade safety, plasticizer free, lightweight, anti fog and anti cross flavor, easy to tear packaging, biodegradable materials, and online and offline channel coverage capabilities. Low end universal products will still face obvious price competition, and enterprises with brand awareness, stable film formula, automated slitting and packaging capabilities, and channel operation capabilities are more likely to maintain stable sales and higher gross profit margins.
