Kjeldahl nitrogen analyzer is an instrument that calculates protein content by measuring the nitrogen content in a sample based on the principle that the nitrogen content in protein is constant. Kjeldahl nitrogen determination or Kjeldahl digestion in analytical chemistry is a method for quantitatively determining the nitrogen contained in organic matter plus the nitrogen contained in inorganic compounds ammonia and ammonium. The empirical relationship between nitrogen content and protein content determined by Kjeldahl nitrogen determination is an important method for analyzing protein. The versatility, precision and repeatability of Kjeldahl nitrogen determination make it an internationally recognized method for estimating protein content in food and the standard method by which all other methods are judged. It is also used to determine soil, wastewater, fertilizer and other materials. However, it does not provide the true protein content because it measures non-protein nitrogen in addition to nitrogen in protein.
