Abstracts

The global Knitted Polyester Geogrids market size is predicted to grow from US$ 407 million in 2025 to US$ 633 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2024, global Knitted Polyester Geogrids production reached approximately 139.71 million square meter, with an average global market price of around US$ 2.8 per square meter. A knitted polyester geogrid is a two-dimensional grid-like geosynthetic material manufactured from high-strength polyester (PET) industrial filaments. It is produced by knitting them into a mesh substrate using warp-knitting machines, followed by oriented stretching and coating with a polymeric layer (e.g., PVC or modified asphalt). Its core characteristic lies in the high junction strength and integrity provided by the knitting technology, combined with the high tensile strength, low creep, and excellent chemical resistance of polyester. It functions by interlocking with soil particles through friction and mechanical restraint, significantly improving the load-bearing capacity of soil, distributing loads, and limiting lateral displacement, making it widely applicable for soil reinforcement in civil engineering projects.

United States market for Knitted Polyester Geogrids is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Knitted Polyester Geogrids is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Knitted Polyester Geogrids is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
