The global KNX Building Automation Solutions market size is predicted to grow from US\$ 15261 million in 2025 to US\$ 26212 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

KNX Building Automation Solution is a standardized smart building control solution using KNX-certified or KNX-compatible devices and software to integrate multiple building subsystems, including lighting, blinds, HVAC, room control, security, metering, energy management, and BMS connectivity. The solution is widely used in residential buildings, hotels, office buildings, commercial buildings, public buildings, schools, hospitals, and high-end smart home projects.

The core value of KNX Building Automation Solution lies in its open standards, multi-brand interconnectivity, distributed control, and high-reliability system characteristics, effectively addressing long-standing pain points in traditional building control such as 'isolated devices, fragmented protocols, difficulties in future expansion, high operation and maintenance costs, and crude energy-saving control.' Compared to closed intelligent systems, KNX integrates multiple subsystems, including lighting, shading, HVAC, security, energy management, hotel guest room control, and building visualization, into a unified platform, enabling buildings to shift from single-device control to cross-system linkage and scenario-based management. Furthermore, KNX boasts a mature ecosystem, a wide range of products, and strong engineering adaptability, making it suitable for high-end residences, hotels, and office buildings, as well as meeting the stability, energy efficiency, and long-term maintainability requirements of public buildings and commercial spaces. With the continued release of demand for building energy conservation, green and low-carbon development, smart hotels, smart offices, and the renovation of existing buildings, KNX Building Automation

Solution is no longer just an intelligent configuration for high-end projects, but is gradually becoming an important infrastructure for improving building operational efficiency, user experience, and asset value, possessing strong growth potential in both new building intelligence and existing building upgrades.
