The global KNX Building Control Systems market size is predicted to grow from US\$ 13874 million in 2025 to US\$ 23980 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

KNX Building Control is a standardized building automation control system based on the KNX open protocol. It connects sensors, actuators, controllers, user interfaces, gateways, and building management platforms to realize integrated control of lighting, shading, HVAC, security, access control, energy management, and room automation. KNX is widely used in smart homes, hotels, offices, commercial buildings, schools, hospitals, and public buildings, especially in projects requiring high reliability, multi-brand interoperability, long service life, and scalable automation.

The core value of KNX Building Control lies in its open standards, multi-brand interconnectivity, distributed control, and high-reliability system characteristics, effectively addressing long-standing pain points in traditional building control such as 'isolated devices, fragmented protocols, difficulties in future expansion, high operation and maintenance costs, and crude energy-saving control.' Compared to closed intelligent systems, KNX integrates multiple subsystems, including lighting, shading, HVAC, security, energy management, hotel guest room control, and building visualization, into a unified platform, enabling buildings to shift from single-device control to cross-system linkage and scenario-based management. Furthermore, KNX boasts a mature ecosystem, a wide range of products, and strong engineering adaptability, making it suitable for high-end residences, hotels, and office buildings, as well as meeting the stability, energy efficiency, and long-term maintainability requirements of public buildings and commercial spaces. With the continued release of demand for building energy conservation, green and low-carbon development, smart

hotels, smart offices, and the renovation of existing buildings, KNX Building Control is no longer just an intelligent configuration for high-end projects, but is gradually becoming an important infrastructure for improving building operational efficiency, user experience, and asset value, possessing strong growth potential in both new building intelligence and existing building upgrades.

United States market for KNX Building Control Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for KNX Building Control Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
