The classical rabbinical writers imply that milk from an animal whose meat is kosher is also kosher. As animals are considered non-kosher if after being slaughtered they are discovered to have been diseased; this could make their milk retroactively non-kosher. However, by adhering to the principle that the majority case overrules the exception, Jewish tradition continues to regard such milk as kosher, since statistically it is true that most animals producing such milk are kosher; the same principle is not applied to the possibility of consuming meat from an animal which has not been checked for disease.
