The Krypton Flash Lamp is a flash lamp that uses krypton gas as the main luminescent material. Krypton is a rare gas with high electron excitation energy and low ground state energy, so it can produce a large amount of ultraviolet and visible light during the discharge process. Krypton Flash Lamp has the characteristics of high luminous intensity, stable color temperature and long service life. It is widely used in lighting and special effects production in photography, film, television, stage and other fields.

In terms of future development trends, Krypton Flash Lamp may continue to play an important role in the lighting field. With the development and application of science and technology, its performance may be further improved, luminous efficiency increased, energy consumption reduced, heat generation and other issues reduced to meet more stringent environmental protection and energy saving requirements.
