The global L-Ascorbyl-2-Phosphate Magnesium market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

L-Ascorbyl-2-Phosphate Magnesium is a water-soluble whitening agent. After the product is absorbed by the skin, it can effectively resist the invasion of ultraviolet rays, capture oxygen free radicals, promote collagen production, effectively prevent and treat pigmentation, remove various skin spots, and make the skin moist, white and tender, smooth and natural. The product is stable, non-toxic and non-irritating, and is an excellent additive for modern functional whitening cosmetics

L-Ascorbyl-2-Phosphate Magnesium, often abbreviated as MAP, is a derivative of vitamin C (ascorbic acid) commonly used in skincare and cosmetic products for its potential benefits to skin health. It is known for its stability and ability to address various skin concerns. As of my last update in September 2021, here are some key market drivers for L-Ascorbyl-2-Phosphate Magnesium in the skincare and cosmetics industry:

Skin Brightening and Lightening: MAP has skin-brightening properties that can help reduce the appearance of hyperpigmentation, dark spots, and uneven skin tone. This makes it a desirable ingredient in products targeting these concerns.

Antioxidant Protection: Similar to vitamin C, MAP possesses antioxidant properties that protect the skin from oxidative stress caused by environmental factors like UV radiation and pollution. Antioxidants help combat free radicals that contribute to premature aging.

Stable Formulation: MAP is a stable derivative of vitamin C, which is known to be

sensitive to light, air, and water. The stability of MAP allows skincare products to maintain their effectiveness over time without as much concern about degradation.

Collagen Synthesis: MAP is believed to stimulate collagen synthesis in the skin. Collagen is essential for maintaining skin elasticity and firmness, making MAP a sought-after ingredient in anti-aging skincare formulations.

Reduced Skin Irritation: While pure ascorbic acid (vitamin C) can sometimes cause skin irritation, MAP is generally considered to be a less irritating derivative. This makes it suitable for individuals with sensitive skin.

Hydration and Barrier Function: MAP can help improve the skin's hydration levels and enhance its natural barrier function, contributing to a healthier complexion.

Acne and Blemish Control: MAP's anti-inflammatory properties can make it effective in addressing acne and blemishes. It can help calm redness and reduce the appearance of breakouts.

Anti-Aging Products: The anti-aging benefits of MAP, including its antioxidant and collagen-stimulating properties, position it as an ingredient of choice in anti-aging skincare products.

Innovation and Product Differentiation: Skincare companies are constantly seeking innovative ingredients that offer unique benefits. MAP's stability and potential for skin improvement drive the development of novel skincare formulations.

Consumer Demand for Effective Ingredients: As consumers become more educated about skincare ingredients, they seek products with proven efficacy. MAP's potential benefits make it attractive to consumers looking for results-driven skincare.

Global Beauty and Wellness Trends: The global focus on wellness and self-care includes skincare routines aimed at achieving healthier and more radiant skin. Ingredients like MAP align with these trends.

Professional and Medical Aesthetics: MAP is used in professional skincare treatments and medical aesthetics for its potential to improve skin conditions and enhance the results of treatments like chemical peels and laser procedures.

Natural and Clean Beauty: MAP is derived from vitamin C, which is found in natural

sources like citrus fruits. This aligns with the growing preference for natural and clean beauty products.

Scientific Research and Studies: Ongoing scientific research into the benefits of MAP and its effects on various skin concerns supports its inclusion in skincare products.
