The global L-(+)-Ergothioneine market size is predicted to grow from US\$ 74.75 million in 2025 to US\$ 419 million in 2032; it is expected to grow at a CAGR of 28.2% from 2026 to 2032.

L-(+)-Ergothioneine is a naturally occurring amino acid and is a thiourea derivative of histidine, containing a sulfur atom on the imidazole ring. This compound is made in relatively few organisms, notably Actinobacteria, Cyanobacteria, and certain fungi. L-(+)-Ergothioneine is a rare natural chiral amino acid with unique cell physiological protection functions such as scavenging free radicals, detoxification, maintaining DNA biosynthesis, normal cell growth, cell immunity, radiation resistance, whitening and anti-aging. Ergothioneine has broad application prospects in the food, cosmetics, functional food and biomedicine industries. In 2025, global L-(+)-Ergothioneine sales reached approximately 3,271.4 Kg, with an average price of 23.4 US\$/g.

The market for L-(+)-Ergothioneine is driven by increasing consumer demand for natural, science-backed antioxidants that support healthy aging, immune function, and cellular protection. As research continues to highlight EGT's unique properties such as its selective accumulation in high-stress tissues and its role in reducing oxidative damage and inflammation, it is gaining traction in the nutraceutical, cosmetic, and pharmaceutical industries. The rise in chronic diseases linked to oxidative stress, along with a growing preference for clean-label and plant-derived ingredients, further accelerates market growth. Additionally, advances in fermentation and biosynthesis technologies have improved the scalability and cost-effectiveness of EGT production, supporting broader commercial adoption.
