The global L-Type Pitot Tube market size is predicted to grow from US$ 153 million in 2025 to US$ 215 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global production ofL-Type Pitot Tube reached approximately 850,000 units, with an average selling price of approximately $175 per unit. The single-line production capacity is approximately 80,000 units per year, with an average gross profit margin of approximately 20-30%. L-Type Pitot Tube is an instrument for measuring fluid velocity. It features an L-shaped tubular structure with a total pressure port at the top facing the flow direction and multiple static pressure ports evenly distributed along the sidewalls. It measures the difference between the total pressure and the static pressure (i.e., dynamic pressure) and calculates the fluid velocity based on the Bernoulli equation.

The upstream supply chain for L-Type Pitot Tube focuses on the metal raw materials industry (stainless steel, special alloy pipes and bars) and the standard parts industry (flanges, threaded fittings, etc.). The downstream supply chain is highly dependent on the process industry and environmental protection sectors. L-type Pitot tubes are widely used in process gas flow measurement in the power, chemical, and metallurgical industries, as well as in flue gas emission monitoring systems in environmental protection projects.
