The global Lab-Created Diamonds market size is predicted to grow from US\$ 26380 million in 2025 to US\$ 42700 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Lab-created diamonds are made in laboratories and factories. These diamonds are identical to natural diamonds in their composition and appearance. Lab grown diamonds are manufactured using techniques such as HPHT, which stands for high pressure and high temperature and CVD, which stands for chemical vapor deposition. Diamonds made in labs are generally of better quality than natural diamonds as they are made in controlled environments with constant monitoring and quality control.

The global lab-grown diamond market has been growing due to factors such as rapid urbanization, falling prices of lab-grown diamonds, increasing demand from end-user industries, rapid growth in the jewelry industry, and growing consumer demand for lab-grown diamonds. The development of laboratory-grown diamonds has been driven by the development of industrial equipment for cutting, grinding, shaping, polishing, and drilling laboratory-grown diamonds. The complexity of the manufacturing process, increased competition for naturally mined diamonds, etc. The development of lab-grown diamonds will be challenged by the growing preference for naturally mined diamonds. Rising consumer awareness, advancements in lab-grown diamond production technology, etc., are expected to grow the market rapidly during the forecast period.
