Lab-manufactured diamond is another term for synthetic diamond, which refers to diamonds that are created in a laboratory setting rather than being formed naturally over millions of years deep within the Earth's crust. These diamonds are produced using various high-pressure, high-temperature (HPHT) or chemical vapor deposition (CVD) processes.

Lab-manufactured diamonds have the same chemical composition and crystal structure as natural diamonds, consisting of carbon atoms arranged in a lattice structure. They possess similar physical and optical properties, including hardness, clarity, and brilliance.
