Laboratory Animal Housing Plastic Cage is a containment system made from durable plastic materials, used to house laboratory animals under controlled environmental conditions. These cages are an essential component of preclinical research facilities, universities, pharmaceutical companies, and biomedical research institutes. Made from high-grade, transparent or translucent plastics like polycarbonate (PC), polysulfone (PSU), or polypropylene (PP), these cages provide a hygienic, safe, and easily sterilizable environment. They are designed to support animal welfare, ensure biosecurity, and allow for efficient observation and handling.

The market for laboratory animal housing plastic cages is growing globally, fueled by increasing R&D activities in drug discovery, biotechnology, and academic research. Rising ethical standards for animal care and the adoption of more sophisticated housing systems, such as Individually Ventilated Cages (IVCs), are shaping demand. North America holds the largest share due to well-established research infrastructure, while Asia-Pacific is witnessing the fastest growth due to expanding pharmaceutical and biotechnology industries. Key players in this market include Tecniplast, Allentown, Lab Products, and Suzhou Fengshi. Trends like automation, modular cage designs, and materials innovation are also influencing market evolution.
