The research report highlights the growth potential of the global Laboratory Animal Models market. Laboratory Animal Models are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Laboratory Animal Models. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Laboratory Animal Models market.

Animal model is a living, non-human animal used during the research and investigation of human disease, for the purpose of better understanding the disease without the added risk of harming an actual human being during the process. Animal models have been used to address a variety of scientific questions, from basic science to the development and assessment of novel vaccines, or therapies. The use of animals is not only based on the vast commonalities in the biology of most mammals, but also on the fact that human diseases often affect other animal species. It is particularly the case for most infectious diseases but also for very common conditions such as Type I diabetes, hypertension, allergies, cancer, epilepsy, myopathies and so on. Not only are these diseases shared but the mechanisms are often also so similar that 90% of the veterinary drugs used to treat animals are identical or very similar to those used to treat

humans.

Pet medical care is the second largest segment in pet industry. In the UK, annual spending on veterinary and other pet services has risen from ?2.6bn in 2015 to ?4bn in 2021, a 54% increase in just six years. According to Vetnosis, the value of the global animal health industry will increase by 12% to \$38.3 billion in 2021. White Paper on China's Pet Healthy Consumption of JD shows that in 2023, there are 13.09 million pets entering middle age and old age. And pet aging is expected to be seen in the next few years. Changes in the age structure of pets will further bring about the development of the pet medical industry. According to the data of the 2022 China Pet Medical Industry White Paper, from the perspective of market size, the scale of China's pet medical market is about ?67.5 billion, accounting for about 22.5% of the entire pet industry. From the perspective of hospital operation time, pet hospitals within 5 years accounted for about 73%. About 11% of the pet hospitals have been in operation for more than 10 years. From the perspective of hospital turnover, nearly 40% of the hospitals have increased their annual turnover year-on-year, and the growth rate is mainly within 200%.
