The global Laboratory Cryogenic Grinders market size is predicted to grow from US$ 86.1 million in 2025 to US$ 114 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

A Laboratory Cryogenic Grinder is a specialized machine used for grinding materials at extremely low temperatures, typically below -150°C. This type of grinder is essential for processing heat-sensitive or brittle materials, such as plastics, pharmaceuticals, food, and chemicals, that may become tough or lose their properties when exposed to higher temperatures. By using liquid nitrogen or other cryogenic gases to freeze the materials, the grinder enhances the material's brittleness, making it easier to break into smaller particles. This method allows for more efficient and precise grinding, ensuring the preservation of the material's original properties.

United States market for Laboratory Cryogenic Grinders is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Laboratory Cryogenic Grinders is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
