## Abstracts

The global Laboratory Freezer Rental Services market size is predicted to grow from US\$ 1106 million in 2025 to US\$ 1654 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

To address the challenges of equipment resource shortages, budget constraints, and limited research flexibility caused by high procurement costs, complex maintenance, and space limitations in laboratories, laboratory freezer rental services have emerged. Since the rise of the concept of laboratory equipment resource management and sharing in the early 21st century, this service has rapidly developed in the field of scientific research logistics support. It has now formed a professional rental system covering various temperature ranges and volumes, including ultra-low temperature freezers, medical refrigerators, and environmental test chambers, and is equipped with a full-process service solution including transportation, installation, monitoring, maintenance, and emergency support. This service is widely used in universities, research institutions, biopharmaceutical companies, medical testing institutions, and startup R&D teams, effectively reducing laboratories' fixed asset investment and operating burdens, enabling on-demand use, rapid deployment, and flexible expansion. This significantly improves the efficiency of scientific research resource allocation, ensures sample storage safety, and provides important support for the continuity and adaptability of scientific research work.
