The research report highlights the growth potential of the global Laboratory Glass and Plastic Ware market. Laboratory Glass and Plastic Ware are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Laboratory Glass and Plastic Ware. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Laboratory Glass and Plastic Ware market.

Laboratory Glass and Plastic Ware has good chemical stability, thermal stability and good transparency. The chemical stability is good, but it is not absolutely not eroded, but the degree of erosion meets certain standards.

It should be noted that hydrofluoric acid can corrode the glass very strongly, so the experiment containing hydrofluoric acid cannot be carried out with glass instruments. The lye, especially concentrated or hot lye, corrodes the glass significantly. If the glass instrument for storing lye is a grinding instrument, the grinding mouth will stick together and cannot be opened. Therefore, the glass container cannot store lye for a long time.
