Laboratory Hydrophobic Chromatography Medium is a chromatographic material used for protein separation and purification. Its separation principle is based on the interaction between the hydrophobic region on the surface of protein molecules and the hydrophobic groups on the media. Under high salt conditions, proteins bind to the media and elution separation is achieved by gradually reducing the salt concentration. This media is widely used in proteomics, biopharmaceuticals and scientific research experiments, and has the advantages of high selectivity, good retention of protein activity, and gentle operation.
