The global Laboratory Steady State Permeameter market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A Laboratory Steady State Permeameter is a device used in soil mechanics and geotechnical engineering to measure the hydraulic conductivity or permeability of soils. Permeability is a key property that describes the ability of a soil to transmit water under the influence of a hydraulic gradient. The steady-state permeameter is designed to provide continuous flow conditions, allowing for accurate measurements of permeability under steady-state flow conditions.

Increased automation in laboratory testing equipment, including permeameters. Automated systems can improve efficiency, reduce human error, and provide more precise control over testing conditions.
