Lactose intolerance continues to persist as a major concern among the world's adult population, with nearly 75% unable to consume milk and its derivatives. The advent of lactase enzyme, such as β -galactosidase, has emerged as a boon for dairy producers, as it hydrolyzes lactose to readily digestible sugars such as galactose and glucose. The recent surge in number of consumers shifting towards lactose-free dairy products is making a huge impact on the dynamics of the lactase enzyme market.
