The global Lactating Sow Feed market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

The market outlook for lactating sow feed is expected to be positive in the coming years, driven by the increasing demand for pork and pork products worldwide. The growing population, urbanization, and rising disposable incomes are expected to boost the demand for animal protein, including pork. As a result, farmers are likely to increase the production of pigs, and this, in turn, will drive the demand for specialized pig feeds such as lactating sow feed. Additionally, advancements in livestock nutrition research and increasing awareness of the importance of nutrition among pig farmers are expected to drive the demand for high-quality lactating sow feed.

Lactating sow feed is a specialized feed designed to meet the nutritional requirements of lactating sows or nursing pigs. Lactating sows have high energy and protein requirements to support milk production and to maintain their own body condition. The feed is typically high in digestible energy, protein, and minerals, and may contain added vitamins and other essential nutrients. It may also contain lactose or whey protein to enhance milk production and colostrum quality. Good lactating sow feed should be palatable and easy to digest, allowing the sow to consume and utilize nutrients efficiently.
