A lactose crystallization system is a specialized process-equipment system used in lactose production, whey valorization and dairy powder quality control. It enables lactose in whey, whey permeate, milk permeate or concentrated lactose liquor to nucleate and grow into controlled crystals through evaporation concentration, cooling, agitation, seeding, residence-time control, continuous crystallization or crystallizing evaporation. The main product forms include hygienic lactose crystallization tanks, continuous cooling crystallization modules, crystallizing evaporators, crystallization sections within lactose production lines, permeate pre-crystallization systems and associated automation controls. The system is designed to control crystal size, crystal population, degree of crystallization, slurry behavior and downstream separation, washing and drying efficiency. It is mainly used in the production of edible lactose, pharmaceutical lactose, infant formula ingredients, whey permeate powder, milk permeate powder, non-caking whey powder, sweetened condensed milk and other high-lactose dairy ingredients.
