## Abstracts

The global Ladder Conveyor Belts market size is predicted to grow from US\$ 489 million in 2025 to US\$ 668 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Trapezoidal conveyor belts are structures that connect longitudinal conveyor belts via crossbars or steps, enhancing grip and stability for bulk materials, loose items, or inclined loads. They are widely used in agriculture, food processing, mining, packaging, and material handling industries. The trapezoidal structure ensures controlled material movement, prevents slippage, and enables efficient conveying on inclined or uneven surfaces. The trapezoidal conveyor belt industry chain includes upstream metal wire, steel plates, polymers, and surface treatment chemicals; midstream involves conveyor belt assembly, step fabrication, welding, heat treatment, and surface finishing; downstream applications cover food processing lines, packaging plants, mining operations, and industrial material handling systems, along with installation, maintenance, and replacement services to ensure long-term stable operation. In 2025, global production of trapezoidal conveyor belts was approximately 12.5 million square meters, with a global average market price of approximately US\$40 per square meter. The gross profit margin of major companies in the industry ranged from 25% to 40%. In 2025, global production capacity of trapezoidal conveyor belts was approximately 16.7 million square meters.
