A laminar flow canopy is a type of canopy used in cleanrooms or other controlled environments to provide a controlled and sterile airflow. It is designed to create a laminar flow of air, which means that the air moves in parallel layers with minimal turbulence.

The laminar flow canopy typically consists of a hood or enclosure that is mounted above the work area. It is equipped with high-efficiency particulate air (HEPA) filters that remove airborne particles and contaminants from the incoming air. The filtered air is then directed downward in a uniform and controlled manner, creating a clean and sterile environment.

Laminar flow canopies are commonly used in industries such as pharmaceuticals, biotechnology, electronics manufacturing, and medical device manufacturing, where maintaining a sterile and controlled environment is crucial. They are often used in conjunction with other cleanroom equipment, such as clean benches or cleanroom suits, to ensure the highest level of cleanliness and sterility.
