The global Laminated Materials for Printed Circuit Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Laminated Materials for Printed Circuit Board (PCBs) refer to composite materials that are used in the construction of PCB substrates. These materials consist of multiple layers of different materials bonded together through a lamination process. The resulting laminates provide the necessary electrical and mechanical properties required for the fabrication of PCBs, which are essential components in electronic devices.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
