Laminating pouches are made out of a combination of two types of plastic, utilising the properties of both: The outer layer is PET (Polyethylene Terephthalate), which is a type of polyester resin that can be formed into various shapes. PET can be made into flat sheets, which makes it ideal for laminating pouches.

Laminating pouches provide a protective layer that helps shield documents from moisture, dirt, tearing, and other physical damage. This is especially important for frequently handled or important materials.
