The fitted megasonic cleaning system is a cleaning device based on ultrasonic technology. It uses the cavitation effect of high-frequency ultrasonic waves in a liquid medium to precisely act on the surface of an object to remove dirt and impurities. The system is characterized by its "fitted" design, which allows ultrasonic waves to evenly cover the surface of the cleaning object and enhance the cleaning effect. It is especially suitable for workpieces that require high-precision and meticulous cleaning, such as electronic components, optical equipment, and precision mechanical parts. Compared with traditional ultrasonic cleaning, the fitted megasonic cleaning system can provide a more efficient and gentle cleaning method, reduce damage to the surface of the object, and is suitable for high-standard cleaning needs.
