The lamp shade is an integral part of the proportion of the overall light fixture. Lamp shades cover the light bulbs of table lamps, floor lamps, hanging pendants, and wall lamps.

A lamp shade's key purpose is to protect the eye from the bulb's glare and to direct light from the bulb in the lamp into the room. Lamp shades can be made of various materials and shapes.

The proper shape greatly affects the kind of light the lamp gives off, as well as where that light is directed. Wood shades, woven fabric shades, metal shades, natural fiber shades, and paper shades are popular shade materials. Usually, a metal wire frame is used to make lamp shades.
