The global LAN Network Transformer market size is predicted to grow from US\$ 346 million in 2025 to US\$ 496 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

A LAN (Local Area Network) Network Transformer is a critical component in Ethernet networks, primarily designed to isolate and protect network devices from electrical noise, surges, and other disturbances. It acts as a barrier between devices, preventing the propagation of unwanted signals that can degrade network performance and cause data corruption.

By employing magnetic coupling, LAN transformers efficiently transmit data signals while blocking common-mode noise.

This isolation ensures reliable data transmission, especially in environments with high levels of electromagnetic interference (EMI).

United States market for LAN Network Transformer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
