Landfill Gas Analyser is a specialized instrument used to measure and monitor the composition of gases produced by the decomposition of organic matter in landfills. These analyzers detect and quantify various gases, primarily methane (CH₄) and carbon dioxide (CO₂), which are the major components of landfill gas, along with other trace gases such as hydrogen sulfide (H₂S) and volatile organic compounds (VOCs). By providing real-time data on gas concentrations, landfill gas analyzers help manage and mitigate environmental and health risks associated with landfill gas emissions. They are essential for ensuring compliance with environmental regulations, optimizing gas collection systems, and enhancing safety by preventing explosions or harmful exposure.

The global Landfill Gas Analyser market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
