Landfill Gas to Energy (LFGTE) Systems are a type of renewable energy system that converts methane gas emitted from landfills into usable energy such as electricity or heat. In landfills, organic waste decomposes and produces methane gas, which contributes to global warming if released into the atmosphere. LFGTE systems help

reduce greenhouse gas emissions by capturing methane gas and converting it into energy. LFGTE systems are an innovative solution to reduce greenhouse gas emissions and generate renewable energy by utilizing methane gas emitted from landfills.
