The global Lanthanum Hexaboride Electron Gun market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Lanthanum hexaboride electron guns are electron guns that use lanthanum hexaboride (LaB₆) as cathode materials. This type of electron gun is widely used in various electron beam equipment due to the excellent properties of lanthanum hexaboride, such as high-energy accelerators, ion sources, electron beam welding equipment, electron beam melting equipment, electron beam cutting equipment, electron microscopes, X-ray tubes, etc. Lanthanum hexaboride has a high melting point (up to 2800K), high hardness, and good chemical stability. It will only start to react with oxygen when heated to above 600°C in air. Compared with other materials, lanthanum hexaboride has an extremely low evaporation rate. When the emission current is 5A/cm², its evaporation rate is only 1% of tungsten. Lanthanum hexaboride has the electrical conductivity and thermal conductivity of metals, which makes it unique as an electron source material. In addition, as an electron source device, the lanthanum hexaboride electron gun plays an important role in industrial flaw detection, medical imaging, scientific research and other fields. For example, when the lanthanum hexaboride single crystal cathode electron gun is used in a scanning electron microscope, the resolution can be increased from 60 angstroms to 40 angstroms, and the cathode life is also extended from dozens of hours to one thousand hours.

As an important component of high-precision instruments and equipment, lanthanum hexaboride electron guns have the advantages of long service life and low electron work function. Therefore, they are widely used in high-precision instruments and equipment such as transmission electron microscopes, electron probes, electron beam

exposure machines, and Auger spectrometers. With the continuous development of science and technology and the continuous expansion of application fields, the market demand for lanthanum hexaboride electron guns is also increasing. In addition, with the continuous development of science and technology, the technology of lanthanum hexaboride electron guns is also constantly innovating and improving. In the future, with the emergence of new materials and breakthroughs in preparation technology, the performance of lanthanum hexaboride electron guns will be further improved.
