The global Lanthanum Hexaboride Electron Microscope market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Lanthanum hexaboride electron microscope, as a type of electron microscope, its key component is that the electron gun uses lanthanum hexaboride (LaB6) material. Lanthanum hexaboride (LaB6) is an electron emission material with high brightness and high stability. Its work function is low (2.4eV), so that at the same current density, the lanthanum hexaboride electron gun only needs a lower heating temperature (such as 1500K) to reach the working state, and the brightness is higher. Transmission electron microscopes equipped with lanthanum hexaboride electron guns usually have high resolution (point resolution can reach 0.19nm, lattice fringe resolution can reach 0.14nm) and fast sample change capability (such as 3 minutes fast sample change). This type of microscope can observe and analyze the microstructure of various materials, including morphology observation, high-resolution electron microscopy research, electron diffraction, etc., and can perform nanoscale micro-area analysis. The equipped X-ray energy spectrometer can perform elemental analysis of the area of ??interest in real time.

Lanthanum hexaboride is widely used in the field of electron microscopy, especially in transmission electron microscopy (TEM), to enhance the contrast and resolution of images. With the continuous development of electron microscopy technology, the market demand for lanthanum hexaboride is also increasing. It is expected that the market for lanthanum hexaboride electron microscopy will maintain its growth trend. This is mainly due to the continuous advancement of electron microscopy technology and the expansion of application fields, as well as the excellent performance and broad

application prospects of lanthanum hexaboride materials themselves. In addition, the application fields of lanthanum hexaboride electron microscopy will be further expanded. In addition to traditional fields such as materials science and biomedicine, it will also involve emerging fields such as new energy and environmental protection. This will bring broader development space for the lanthanum hexaboride electron microscopy market. Secondly, with the increasing global attention and investment in new materials and new technologies, the lanthanum hexaboride electron microscopy market will usher in more development opportunities. In summary, the lanthanum hexaboride electron microscopy market has broad development prospects and potential.
