Lanthanum hexaboride (LaB6) ceramic target is a boride ceramic material composed of lanthanum and boron. The material is typically synthesized by reacting lanthanum oxide (La₂O₃) and boron oxide (B₂O₃) at high temperatures, followed by reduction with carbon or hydrogen. LaB₆ crystallizes in a cubic structure, with lanthanum atoms occupying the corners of the cube and boron atoms occupying the center of each face of the cube. This crystal structure gives the material unique properties, including high electrical conductivity and thermal stability.
