Laparoscopic cutting and stapler is a special instrument used for cutting and stapling operations in laparoscopic surgery. Laparoscopic surgery is a minimally invasive surgical technique that inserts endoscopic instruments through small incisions or tracts to perform endoscopic operations. It is widely used in many fields, such as gastrointestinal surgery, urology, gynecology, etc. Endoscopic cutting and staplers usually consist of two parts: a cutter and a stapler. A cutter is generally an instrument with a blade used to cut tissue or organs. Staplers are used to anastomose cut tissues or organs, usually by suturing or using special staples to connect the tissues or organs together. The design and use of laparoscopic cutting and staplers are designed to achieve precise cutting and anastomosis operations, reduce surgical trauma and bleeding, shorten surgical time, and improve surgical results and patient recovery speed. The laparoscopic cutting stapler is one of the important tools in laparoscopic surgery, allowing doctors to complete complex surgical operations under minimally invasive conditions.
