The laparoscopic ultrasound probe is an ultrasound device used in laparoscopic surgery. It can be inserted into the abdominal cavity through an abdominal wall puncture cannula, and scan directly with the tissues and organs under examination under the laparoscopic field of view to obtain high-resolution ultrasound images. It can display the internal structure, location, scope, blood flow, etc. of organs and lesions that cannot be directly viewed under laparoscopy, and help diagnose and guide surgical operations. It is suitable for the examination and treatment of abdominal organs such as liver, gallbladder, pancreas, spleen and so on. It is a safe, effective and accurate laparoscopy-assisted technique.
