A bulldozer is an engineering vehicle with a large metal bulldozer in front of it. When in use, put down the bulldozer to shovel and push mud, sand and stones forward. The position and angle of the bulldozer can be adjusted. The bulldozer can complete excavation, earth-moving and earth-unloading work alone, and has the characteristics of flexible operation, convenient rotation, small required working surface and fast driving speed. It is mainly suitable for shallow excavation and short-term transportation of the first to third types of soil, such as site cleaning or leveling, excavation of foundation pits with a small depth and backfilling, and construction of subgrades with a small height. Large bulldozers have a horsepower of more than 220 horses.
