The global Large Diameter Fiber Reinforced Composite Hose market size is predicted to grow from US\$ 358 million in 2025 to US\$ 623 million in 2031; it is expected to grow at a CAGR of 9.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Large-diameter fiber-reinforced composite hose (Lay-Flat hose) is used for temporary pipeline layout and large-flow chemical delivery, including shale oil and gas development, fracturing fluid delivery, remote emergency large-flow water supply for firefighting, remote drainage and battlefield oil delivery. The drilling process of hydraulic fracturing is a process that requires a lot of water. Public attention to this process (also known as fracking) is mainly focused on the mixture of water and chemicals injected underground to break open rocks and release gas.

Shale oil and gas production has a huge demand for fracturing fluid. In the early stage, the downstream industry generally used special vehicles to transport fracturing fluid. Large-diameter fiber-reinforced composite hoses have realized the low-cost, fast and fully automatic laying of long-distance and large-flow delivery pipelines, which significantly reduced the cost of production and was an important factor in the commercial success of the shale gas revolution.
