The global Large Mining Truck market size is predicted to grow from US\$ 3978 million in 2025 to US\$ 5054 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

Large mining trucks are off-road rigid dump trucks designed for heavy-duty transportation scenarios such as open-pit mines and large earthwork projects. They usually have extremely high load capacities (usually between 100 tons and 400 tons), are equipped with powerful diesel or electric power systems, and are equipped with high-strength frames, giant tires, and advanced hydraulic and braking systems. Such vehicles can operate for long periods of time in harsh terrain and high-intensity working conditions, and are key equipment for modern mining areas to achieve high-efficiency, large-scale transportation operations. Representative models include Caterpillar CAT 793, Komatsu 930E, Liebherr T 284, etc.

Against the backdrop of efficient development of global mining resources and accelerated infrastructure construction, the large mining truck market is showing a steady and positive development trend. As the core equipment for high-intensity transportation in large open-pit mines, this type of mining truck is widely used in key areas such as metal mines, coal mines and large earthwork projects with its superb carrying capacity and excellent operating efficiency. It has become an important technical force to promote the scale of production and intensive transportation in the resource industry.

From the perspective of driving factors, the global energy transformation and the continued growth in demand for metal resources are the main engines driving market expansion. The rapid development of downstream industries such as new energy and electric vehicles has led to a continuous increase in the mining volume of key metals such as copper, lithium and nickel, and the demand for the purchase and replacement

of large-tonnage mining trucks has continued to increase. At the same time, the expansion plans of large mining areas in mineral resource-concentrated areas such as South America, Africa and Australia have also injected strong momentum into the market.

However, market development also faces certain unfavorable factors. First, the high cost of purchasing oversized tonnage trucks, which can easily cost more than one million US dollars, makes small and medium-sized mining companies reluctant to buy them; second, the high requirements for road foundation, maintenance and guarantee system and operation technology level during their use limit their promotion in some developing regions. In addition, global raw material price fluctuations, macroeconomic downside risks and stricter carbon emission regulations also pose challenges to corporate investment decisions.

At present, the global market structure is dominated by a few international mainstream manufacturers. Caterpillar, Komatsu, Liebherr, BelAZ and other companies have a dominant position with strong technical accumulation, product stability and service network. Some Chinese manufacturers such as XCMG, Northern Heavy Industries, and Xiangdian have also accelerated technological breakthroughs and overseas layout in recent years, and have begun to emerge in emerging markets. The prosperity of the mining vehicle industry is highly related to the real economy and has obvious characteristics of a cyclical industry. The large-scale mining vehicle industry is currently in a relatively mature development stage, and the industry concentration of products is relatively high.

Looking ahead, intelligence, electrification and unmanned driving technologies will become the core trends in the development of large-tonnage mining trucks. Many OEMs have launched a new generation of mining trucks equipped with autonomous driving systems, electric drive systems or hybrid platforms to help mining areas reduce costs, increase efficiency and reduce carbon emissions. It is expected that with the promotion of green mining policies and the accelerated implementation of smart mining, the market potential of this type of high-end equipment will continue to be released globally.
