According to our (LP Info Research) latest study, the global Large Size Cell market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Large Size Cell is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Large Size Cell market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Large Size Cell are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Large Size Cell. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Large Size Cell market.

Large-size cells refer to larger-sized solar cells, usually beyond the traditional size standard. The main features of large-size cells are larger area and higher power output. This type of cell usually uses advanced manufacturing processes and technologies, which can provide higher conversion efficiency and higher power density.

Since 2022, the demand for large-size cells has exceeded expectations, and the market share has reached more than 80%. The shortage of large-size products has promoted the recovery of the overall profitability of cells. The net profit per watt of specialized cell companies is about 3-4 points. Some leading Chinese companies such as Tongwei and Aixu are expected to have a net profit per watt of more than 4 points, and Junda can reach more than 5 points.

From the analysis of cell production capacity, with the release of PERC expansion capacity and the accelerated landing of N-type cell production capacity, coupled with the advantages of high power output and cost-effectiveness of large-scale products, the demand for large-scale ground power stations and distributed projects will drive large-scale. The rapid advancement of large-scale modules, considering the launch of new production capacity in 2023, the production capacity of large-scale cells will reach 800GW in 2023, accounting for more than 90%. In the future, the large-size solar cell market will continue to maintain a good momentum of development, and the main trends will be a tight balance between supply and demand, improved profitability and expanded application fields.
