Abstracts

The global Laser Beam Expander Lens market size is predicted to grow from US$ 106 million in 2025 to US$ 181 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

A Laser Beam Expander Lens is an afocal optical assembly used to increase the diameter of an incoming collimated laser beam and, at the same time, reduce its beam divergence or optimize the focused spot size after downstream focusing optics. In a laser system, it is normally installed between the laser source and the focusing lens, scan lens or processing head, and is selected according to laser wavelength, expansion ratio, input beam diameter, output clear aperture, power level and beam-quality requirements. Structurally, it is usually based on Galilean, Keplerian or reflective telescope configurations rather than a single optical lens.

The upstream raw materials of Laser Beam Expander Lenses mainly include optical substrates, coating materials and mechanical housing materials. Downstream, Laser Beam Expanders are mainly used in industrial laser processing equipment, semiconductor and PCB manufacturing, laser marking and drilling systems, laser ranging and remote sensing, optical metrology, spectroscopy, microscopy and laboratory photonics systems.

In 2025, global sales of Laser Beam Expander Lens reached approximately 209 K units, with an average global market price of around US$ 520/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 50%.
