The global Laser Capture Microdissection market size is predicted to grow from US\$ 157 million in 2025 to US\$ 239 million in 2031; it is expected to grow at a CAGR of 7.3% from 2025 to 2031.

Laser capture microdissection (LCM) is an automated sample preparation technique that enables isolation of specific cells from a mixed population under microscopic visualization. This technique of isolating a pure sample from a heterogeneous mixture allows for more efficient and accurate results with downstream microgenomics applications such as next-generation sequencing, Sanger sequencing, PCR, and proteomic.

The major players in global Laser Capture Microdissection market include Leica Microsystems , Thermo Fisher Scientific, etc., and the market concentration rate is high. North America and Europe are main markets, they occupy about 60% of the global market. rcturusXT™ LCM System is the main type, with a share about 70%. Research Institutions is the main application, which holds a share about 60%.
